## A TRIO OF INGREDIENTS UNIQUELY COMBINED FOR SAFE AND RELIABLE PROTECTION

6 Ticks

### KILLS 6 SPECIES OF TICKS

Ticks aren't just gross, they can transmit diseases to your dog! Killing ticks quickly can help reduce the risk of tick-borne disease transmission to your dog.

Fleas

### KILLS FLEAS FAST

Flea infestations can happen quickly and they can be overwhelming. Fleas can carry diseases and can also cause skin irritation and itching. Simparica TRIO kills adult fleas fast all month long before they can lay eggs. This breaks the flea lifecycle which helps prevent home infestations.

Hookworms

### PROTECTION FROM GASTROINTESTINAL PARASITES

Puppies can be infected with GI parasites at birth, and adult dogs can pick up worm eggs or larvae in the environment. Roundworms can be transmitted to humans, so control of this infection is important to help prevent egg contamination in the environment. Simparica TRIO provides proven protection from roundworms and hookworms.

Roundworms

Demodex

### PROVEN PROTECTION AGAINST MANGE

Proven protection from demodectic mange, which causes hair loss, secondary infection and debilitating disease, and Sarcoptic mange a highly contagious mite that causes intense itching and can be transmitted to humans.

Sarcoptes

### REDUCES THE RISK OF LYME DISEASE

Simparica TRIO has fast and consistent protection all month against the deer tick (*Ixodes scapularis*) which can help reduce the risk of Lyme disease transmission.

*B. burgdorferi*

Heartworms

### 100% PROTECTION FROM HEARTWORM

Just one bite from an infected mosquito can lead to potentially fatal heartworm disease. Monthly treatment during the heartworm transmission season is essential to prevent heartworm disease.

# PARASITE PROTECTION AS EASY AS 1-2-3!

**1**

**One tasty all-in-one monthly  
chew that your dog will love.**
